MULTIPLE CHOICE QUESTIONS

DEVELOPING AN INFORMATION SYSTEM

Answer the questions by putting the chosen letter in the box on the answer sheet or by circling the correct letter.

- 1 Name three steps involved in developing an information system.

 - A. Specification, Design, and Testing
 - B. Programming, Design, and Testing
 - C. Analysis, System Design, and Implementation

- 2 How do you define 'Analysis' of an information system?

 - A. Analysis translates program code of a high level language to machine code
 - B. Analysis is the loading of programs that perform routines to control peripheral devices
 - C. This involves looking at a system and finding out how information is being handled

- 3 What areas need to be considered in the design process?

 - A. Only hardware and software
 - B. Inputs, outputs, file design, hardware, and software
 - C. Maintenance, reliability, and upgradeability

- 4 Implementation of a new system can be done in the following ways:

 - A. Design and testing of the system
 - B. Direct implementation and parallel running
 - C. Testing and analysing the system

- 5 What is Direct Implementation?

 - A. Users operate the manual system and computer system at the same time
 - B. Users operate the computer system from a given date
 - C. Users operate the manual system

- 6 What is parallel running?

 - A. The new system is introduced alongside the existing system
 - B. The new system is introduced and users start operating it
 - C. Users continue operating the old system

MULTIPLE CHOICE QUESTIONS

DEVELOPING AN INFORMATION SYSTEM

7. What documents are produced during the development of a system?
- A. Instructions and technical documentation
 - B. Log files and temporary files
 - C. User Guide and technical documentation
8. What are User Guides are used for?
- A. For technical support
 - B. To enable any printer to be connected to the network
 - C. User guides cover how to run the system, enter data, save, print, etc.
9. Why do specialists use Technical Documentation?
- A. To explain the way the system has been programmed
 - B. To explain how the system works and the technical requirements
 - C. To explain what to do in case of a failure
10. Technical documentation needs to be:
- A. Reviewed every five years
 - B. Fully up-to-date and accurate
 - C. Stored and forgotten
